PROFESSIONAL SUMMARY

Fifth-year Computer and Communications Engineering (Multimedia) student, proficient in full-stack web development and especially in front-end and design. A confident communicator and strategic thinker, eager to apply my skills and enhance my expertise.

EXPERIENCE

Junior Full Stack Developer — Bamptee

June 2025 – Present

- Designed and implemented new features, REST/GraphQL APIs, and end-to-end React pages.
- Performed extensive bug fixing, UI testing, and enhancement.
- Participated in agile development workflows including daily stand-ups, sprint planning, and code reviews.

Intern Software Developer — Orthodox Archdiocese of Beirut

June 2024 – September 2024

- Fully developed and designed the front-end of Beirut Annunciation College's website using React and Figma.
- Revised and updated legacy codebases to modern development standards.

EDUCATION

Bachelor of Engineering in Computer and Communications (Master level) – Multimedia

Antonine University, Lebanon

2022 – 2027

PROJECTS

BiteCheck — Mobile App

- Full-stack mobile app with JWT/bcrypt authentication and OCR-based ingredient scanning (Tesseract.js).
- Rule-based analysis engine returning quality scores, risk flags, and personalized allergy/dietary warnings.

Eventful — Full-Stack Event-Planning Marketplace

- Designed the UI/UX in Figma, then developed a React/Vite frontend and Express/MongoDB backend with custom Bearer-token authentication.
- Built a premium AI event planner using Google Gemini, grounding every recommendation in the live service catalog and validating output before returning it — plus checkout, availability conflict detection, and review logic.

Smart Inventory — AI-Powered Plant Inventory System

- Full-stack app combining a React/FastAPI/MongoDB CRUD system with a fine-tuned PyTorch (EfficientNet-B0) model for plant image classification.
- Integrated a scikit-learn RandomForest pipeline for context-aware price prediction, with duplicate-product detection and GridFS image streaming — both AI models run locally.

Castle Escape — 3D Unity Game

- Built a four-level 3D Unity game in C#: a key-hunt puzzle, an ingredient/recipe brewing puzzle, wave-based projectile combat, and a scripted boss fight.
- Used Unity's Animator, Rigidbody physics, and UGUI/TextMesh Pro across all levels; shipped as a Windows standalone build.

CREATIVE PROJECTS

Alongside development, I work across 3D modeling, branding, film, and digital editing:

- 3D Modeling — designed and modeled a set of original 3D pieces as an independent creative project series.
- Short Film — independently wrote, shot, and produced a short film: composed and mixed the audio in Studio One and edited the full video in Vegas Pro.
- Branding — designed a complete brand identity for a business, including logo, business card, and catalogue (Adobe Illustrator, Photoshop, InDesign).
- Editing & Social Content — produced presentations, invitations/cards, and short-form marketing videos for social platforms using Canva and CapCut.

SKILLS

Web Development: Front-end Frameworks, React, HTML, CSS, JavaScript, UI/UX Design, PHP, Laravel, Node.js, Express, Spring Boot, FastAPI, MongoDB, Mongoose, MySQL, PL/SQL, GridFS

Programming Languages: JavaScript, TypeScript, PHP, Java, C++, C#, Python

AI / ML: PyTorch, scikit-learn, Google Gemini API

Game Development: Unity, 3D Modeling

Design & Tools: Figma, Adobe Illustrator, Photoshop, InDesign, Canva, CapCut, Studio One, Vegas Pro

LANGUAGES

English — C2 French — C2 Arabic — Native
